SCORM

Not to be confused with score, scorn or corn

What is SCORM

SCORM is a technical standard for many e-learning products and is often used to create course content. Once enabled, the SCORM Link will appear in the Course Navigation menu. SCORM packages are imported as External Tool Assignment submissions.
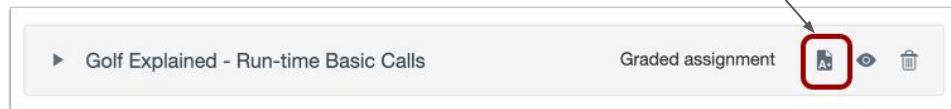

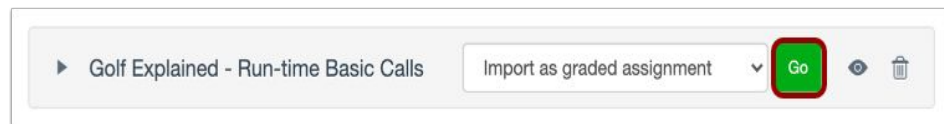

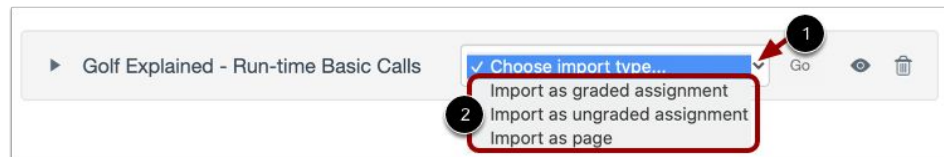

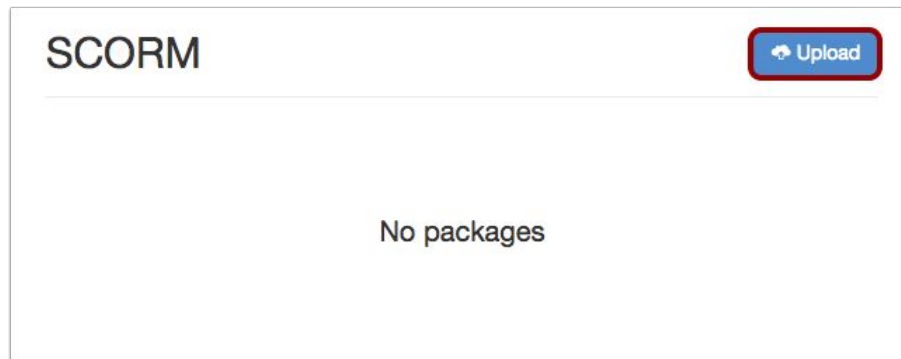

This will need to be enabled by the CSM before this can be used.

How do I import it?

To import you will need to select SCORM from the side navigation.

Once you are there go to the blue "upload" and proceed to upload the SCORM file that is needed to be uploaded, then choose the import type and select "Go"

After you have selected "Go" you can edit the assignment, preview and/or delete it.

How to tell if an assignment is a SCORM file?

The best way to check is to go to the SCORM page from the left side navigation and check the tag by it.

As well if you click on the assignment it will appear similar to how a LTI assignment would

▶ Employee Health and Wellness (Sample Course)   Graded assignment

Grade passback

After students have completed the SCORM assignment and have received a grade, the grade will automatically pass back to the Canvas gradebook.

Note: If grades do not pass back to the Canvas gradebook, check to see if there are any open Jiras and have the user try submitting their SCORM assignment through a different web browser other than Chrome. If grades are still not passing back, using the steps in the following slide.

Troubleshooting SCORM

The first step of troubleshooting is getting the file that the user used to upload the SCORM package. Once you get the file go to #ask-a-canvas-expert and a L2 can look further into this with you.

You can also create a [free SCORM cloud account](#) to upload and test a SCORM package file to ensure it's functioning properly and passing back grades. This can be helpful to see whether or not it's an issue with the package file itself or a Canvas issue.

Additional notes

- If you delete a SCORM assignment in the Pages page, you can still view the uploaded page on the SCORM page. However, if you delete the uploaded page in the SCORM page, the page is also deleted from all other applicable Canvas locations.

- Canvas supports the following versions of SCORM: SCORM 1.2 and SCORM 2004 (2nd, 3rd, and 4th Edition).

- SCORM is not available in beta or test environments of Canvas.

Activity

Access and take the SCORM assignment to practice seeing how students would interact with it. You may access it through your Admin view or by acting as a random student in the course.

Conclusion

- SCORM is not available in beta or test environments of Canvas.

- Always get the file if they are seeing errors

- It has to be enabled by the CSM
